ENGG*2660 Biological Engineering Systems - Winter 2011

Instructor and TA Information

<u>Instructor:</u> Manju Misra, Associate Professor, School of Engineering, 215 Thornbrough Building, University of Guelph, Guelph, Ontario, N1G 2W1.

E mail: mmisra@uoquelph.ca, Tel: 519-824-4120 Extension 58935, 56766 Fax: 519-836-0227

<u>Office Hours:</u> TBA or by appointment (if you've got a quick question/concern please feel free to send me an email or talk to me before or after class; if you have a question(s)/concern(s) that requires more time, we can set a time to meet that will work for both of our schedules).

Teaching Assistant:

Nikolas Trutiak: ntrutiak@uoguelph.ca

Office: Room 319 in the library Building, Office Hours: TBA

Course and Schedule Information

Course Description:

Bioengineering is a broad discipline that integrates engineering principles with biological sciences. Applications include biochemical and food engineering, biomedical engineering and bioresource engineering. Systems identification and analysis are common to all of these areas and form the foundation for engineering design.

This course uses techniques and tools developed in ENGG*2400 to analyse mass, energy and momentum components of biological systems. We will focus on systems containing biological catalysts (e.g. cells, enzymes) and/or other reacting species, or mechanical systems from the human body. A range of biosystem examples will be studied including those pertaining to the biomedical, food and bioprocessing industries.

Prerequisites: ENGG*2400, MATH*2270, (BIOL*1030 or MICR*1020)

Class Time: MWF 10:30AM-11:20AM MACK Building, Room 229

Tutorial: Thur - 09:30AM - 10:20AM MACK Building, Room 228

Reading Week No Classes: Feb. 21 - Feb. 25, 2011

Final Examination: Monday 7:00 p.m. - 9:00 p.m. (April 11, 2011) Room TBA

Recommended Texts:

Bioprocess Engineering Principles, P. M. Doran Academic Press, Toronto 1995
Introduction to Biomedical Engineering, M.M. Domach, Pearson Education Inc., 2004
Molecular Cell Biology 6th Edition, Lodish, Harvey et al. W. H. Freeman and Company, NY, 2008
Introductory Biomechanics: From Cells to Organisms, C. Ross Ethier and Craig A. Simmons 2007

<u>Course Website:</u> login to CourseLink https://courselink.uoguelph.ca

Lecture notes will be posted on the course website (CourseLink) throughout the semester. You will be granted access to the website when you register for the course.

Learning Objectives

Upon successful completion of this course, students will be able to:

- Identify and analyse mass and energy transformations in biological systems.
- Develop mathematical models for biological systems and analyse their dynamic behaviour.
- Integrate fundamental principles of microbiology and biochemistry with quantitative analysis to solve engineering problems.

Tentative Topics

Review:

-Cell characteristics, physiology and growth requirements

Bioprocessing Engineering:

- -Mass balances conservation of mass; process flow diagrams; mass balances with and without reaction; total mass vs. composition; steady state and dynamic systems
- -Energy balances- conservation of energy; enthalpy; heats of reaction; energy of phase changes -Reaction kinetics kinetics of cell growth and product formation; enzyme kinetics; first-order kinetics; temperature effects

Biomedical Engineering:

- -Musculoskeletal System Muscle anatomy, structure and function, active and sliding filament models
- -Circulatory System Overview of anatomy, function, blood properties, flow and resistance
- -Biomaterials and tissue engineering

Marking

Activity	Percentage of Final Grade
Quizzes and Assignments	30%
Term Project	20%
Final Examination Monday 07:00 p.m 9:00 p.m. (2011/04/11)	50%

Weekly assignments will be handed out through Courselink. Students are encouraged to complete all of these assignments. The teaching assistant will announce the due date for each assignment during the tutorial sessions. Late assignments will receive a grade of 0. The questions will be marked rigorously – i.e. solutions should be thoroughly and professionally presented. Quizzes will be held biweekly during tutorial sessions. The teaching assistant will provide a review and help with questions before the quiz during tutorial sessions.

Stipulations for passing the course

In order to pass the course, students must complete and pass all assigned term work (quizzes, assignments, and project) and the final examination. Students must obtain a grade of 50% or higher on the exam portion of the course in order for the quizzes and assignments, and the term

project portions of the course to count towards the final grade. Similarly, students must also obtain a grade of 50% or higher on the quizzes and assignments, and term project portions of the course in order for the examination portion of the course to count towards the final grade.

University Policy on Academic Misconduct:

Academic misconduct, such as plagiarism, is a serious offence at the University of Guelph. Please consult the Undergraduate Calendar 2010-2011 and School of Engineering programs guide, for offences, penalties and procedures relating to academic misconduct.

http://www.uoguelph.ca/registrar/calendars/undergraduate/current/c08/c08-amisconduct.shtml

Communications

Communications are through announcements in class. Some information will be posted on the course website and some will be out through e-mails (we usually go through student's messages twice a week). Therefore please do not expect immediate reply to your emails.

Disclaimer

The instructor reserves the right to change any or all of the above in the event of appropriate circumstances, subject to the University of Guelph Academic Regulations.
